

Solution Requirements

Date	30 September 2026
Team ID	SWTID-2026-8779
Project Name	PocketSmart AI – Your Smart Budget & Recommendation System
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	<i>Users can securely register and log in using their credentials.</i>	High
2	Authorization levels	<i>Users can access budget planners, recommendations and their own history after login.</i>	Medium
3	External interfaces	<i>The system connects with the Gemini AI service to generate personalized recommendations.</i>	High

4	Transactions processing	<i>The system accepts budget, preferences and requirements and processes them to create a suitable spending plan.</i>	High
5	Reporting	<i>The system displays budget details, recommendations and previously generated plans in the History section.</i>	High
6	Business rules, etc.	<i>Recommendations should be generated according to the user's budget, preferences, occasion and selected planner.</i>	High
7	Compliance to laws or regulations	<i>User credentials and personal information should be handled securely and protected from unauthorized access.</i>	Medium
8	Other	<i>The system provides Home, Party and Jewelry budget planners with personalized recommendations.</i>	High

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	<i>The system should respond quickly to user actions and recommendation requests.</i>	<i>Page loads and normal actions within 2–3 seconds.</i>

2	Scalability	<i>The system should support increasing users and recommendation history without major performance issues.</i>	<i>Supports multiple users and stored plans.</i>
3	Security & Data Privacy	<i>User authentication and stored user data should be protected from unauthorized access.</i>	<i>Authenticated access required for protected features.</i>
4	Reliability & Availability	<i>The system should continue working even when the external AI service temporarily fails.</i>	<i>Local fallback recommendation available during temporary AI failures.</i>
5	Usability & Accessibility	<i>The interface should be simple, responsive and usable on desktop, tablet and mobile devices.</i>	<i>Responsive UI across major screen sizes.</i>
6	Other	<i>The system should be easy to maintain, test and update.</i>	Modular code structure with successful functional/E2E testing.
