

Technology Stack

Date	30 September 2026
Team ID	SWTID-2026-8779
Project Name	PocketSmart AI – Your Smart Budget & Recommendation System
Maximum Marks	2 Marks

Define Your Technology Stack:

- **Frontend: HTML, CSS, JavaScript** – used to build the responsive and user-friendly interface.
- **Backend: Python with Flask** – handles authentication, planner logic, recommendation processing, and application routing.
- **Database: SQLite** – stores user accounts, budget plans, and recommendation history.
- **AI Integration: AI-based recommendation logic** generates personalized budget suggestions based on user requirements.
- **Development Tools:** VS Code, Git, GitHub, and Playwright for development, version control, and end-to-end testing.

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side	HTML, CSS, JavaScript	Used to create a simple, responsive and user-friendly interface for budget planners and recommendations.

2	Backend / Server-Side	Python FastAPI	Handles user requests, authentication, budget processing and recommendation generation efficiently.
3	Database / Data Storage	SQLite	Stores user details, budget plans and recommendation history in a lightweight relational database.
4	Cloud / Hosting / Deployment	Render	Provides simple and cost-effective deployment for the web application and backend service.
5	Version Control & CI/CD	GitHub	Used for source-code management, version tracking and project collaboration.

6	Third-Party APIs / Other Tools	Google Gemini API	Used to generate personalized recommendations based on the user's budget, preferences and requirements.
