

Project Initialization and Planning Phase

Date	30 september 2026
Team ID	SWTID-2026-8779
Project Title	PocketSmart AI – Your Smart Budget & Recommendation System
Maximum Marks	5 Marks

Project Proposal (Proposed Solution) report

PocketSmart AI is a smart budgeting and recommendation system that helps users plan their expenses based on their available budget and requirements. The system provides personalized recommendations for home, party and jewelry planning, helping users make better spending decisions within their budget.

Project Overview	
Objective	To develop a smart system that helps users manage their budget and receive personalized recommendations based on their requirements and spending limits.
Scope	The system covers budget planning for home, party and jewelry requirements. Users can enter their budget and preferences and receive suitable recommendations.
Problem Statement	
Description	Users often find it difficult to plan expenses and choose suitable products while staying within a fixed budget.
Impact	This can lead to overspending, time-consuming searches and difficulty in comparing suitable options.
Proposed Solution	
Approach	PocketSmart AI collects the user's budget, occasion and preferences and generates personalized recommendations that match the user's requirements and available budget.
Key Features	- Budget-based recommendations - Home, party and jewelry planners

	• Personalized suggestions • Recommendation history • Image-based jewelry planning

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	Development and application processing	Standard laptop/PC
Memory	RAM for development and testing	8 GB RAM
Storage	Application, database and project files	256 GB+ SSD
Software		
Frameworks	Backend web framework	Python Flask
Libraries	Data processing and recommendation support	Python libraries
Development Environment	IDE / code editor	Visual Studio Code
Data		
Data	Budget, preferences and recommendation data	JSON / SQLite / CSV
