

Coding & Solution

Date	01 October 2026
Team ID	SWTID-2026-8779
Project Name	PocketSmart AI – Your Smart Budget & Recommendation System
Maximum Marks	5 Marks

Coding & Solution

- Developed using **Python Flask** with structured and efficient coding.
- Implements **budget planning and AI-based recommendation logic**.
- Handles user inputs, authentication, and recommendation generation.
- Provides separate solutions for **Home, Party, and Jewelry planning**.
- Designed for easy maintenance and future feature expansion..

Solution Summary

Field	Details
Repository Link / URL	https://github.com/abijithabijith632-png/pocketsmartAI.git
Programming Language(s)	Python, HTML, CSS, JavaScript
Framework(s) Used	FastAPI, Uvicorn
Key Features Implemented	AI recommendations, Home Planner, Party Planner, Jewelry Planner, User Authentication, History
Pending / Incomplete Features	None
Setup / Run Instructions	Install dependencies, configure Gemini API key, run FastAPI using Uvicorn

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

The solution uses a modular FastAPI architecture with reliable AI recommendation handling, error handling, fallback responses, authentication, and history management. The application was tested using Playwright and API health checks.
