

Project Executable Files

Date	01 October 2026
Team ID	SWTID-2026-8779
Project Name	PocketSmart AI – Your Smart Budget & Recommendation System
Maximum Marks	3 Marks

Project Executable Files

- **app.py** – Main Flask application file.
- **requirements.txt** – Contains the required Python dependencies.
- **templates/** – Contains the HTML files for the application pages.
- **static/** – Contains CSS, JavaScript, and other static assets.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	N/A
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	N/A
7	APK / Executable binary (if applicable for mobile/desktop apps)	N/A
8	Dockerfile / Containerization config (if applicable)	N/A
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

PocketSmartAI/

- |— app.py – Main Flask application
- |— templates/ – HTML pages and UI templates
- |— static/ – CSS, JavaScript and static assets
- |— database/ – Database-related files
- |— requirements.txt – Python dependencies
- |— .env – Environment configuration
- |— README.md – Project setup and run instructions:

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Localhost – http://127.0.0.1:8000
Login Credentials (Demo)	Use registered PocketSmartAI account
Platform / Hosting Provider	Flask – Local Development Server
Repository Link	https://github.com/abijithabijith632-png/pocketsmartAI.git
Demo Video Link	https://drive.google.com/file/d/1JBSJE1arjR657ntFuvPLX3_PzGKfINQF/view?usp=drivesdk

Step 4: Run Instructions

Pre-requisites: Python 3.x and required dependencies.

Step 1: Open the PocketSmartAI project folder.

Step 2: Install dependencies using `pip install -r requirements.txt`.

Step 3: Configure the required environment variables.

Step 4: Run the Flask application using `python app.py`.

Step 5: Open `http://127.0.0.1:8000` in a browser.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	AI recommendations depend on configured AI logic/service	Verify configuration before demo
2	Application currently runs locally	Local Flask server used for demonstration
3	Recommendation data depends on user inputs	Enter valid budget and requirements
